## ADDENDUM: SOCIO-ECONOMIC IMPACT ASSESSMENT FOR THE PROPOSED MAKGANYANE MINING RIGHT

---

This addendum serves to confirm that the updated layout of the Stockpile Area (SA) and Waste Rock Dump (WRD), as provided by the project proponent after the finalisation of the SEIA, has been reviewed. The changes are minor and remain within the original project development area assessed in the SEIA.

### Confirmation of Findings:

- The updated layout does not alter the location of key project components in a way that would introduce new socio-economic receptors or affect the conclusions drawn in the original impact assessment.
- No additional households, infrastructure, or community facilities fall within areas newly affected by the revised SA or WRD layout.
- The scope and intensity of socio-economic impacts (positive or negative) as described in the SEIA remain unchanged.
- No new mitigation measures are required.

The revised project layout does not result in any material change to the socio-economic findings and recommendations contained in the SEIA (dated 2 May 2025). This addendum is submitted to confirm alignment between the updated project layout and the findings of the original SEIA report.

A handwritten signature in black ink, appearing to read "Marvin Gabara".
