# INDEMNITY AND CONDITIONS RELATING TO THIS REPORT

The findings, results, observations, conclusions and recommendations given in this report are based on the author's best scientific and professional knowledge as well as available information. The report is based on survey and assessment techniques which are limited by time and budgetary constraints relevant to the type and level of investigation undertaken and HCAC reserves the right to modify aspects of the report including the recommendations if and when new information becomes available from ongoing research or further work in this field, or pertaining to this investigation.

Although HCAC exercises due care and diligence in rendering services and preparing documents, HCAC accepts no liability, and the client, by receiving this document, indemnifies HCAC against all actions, claims, demands, losses, liabilities, costs, damages and expenses arising from or in connection with services rendered, directly or indirectly by HCAC and by the use of the information contained in this document.

This report must not be altered or added to without the prior written consent of the author. This also refers to electronic copies of this report which are supplied for the purposes of inclusion as part of other reports, including main reports. Similarly, any recommendations, statements or conclusions drawn from or based on this report must refer to this report. If these form part of a main report relating to this investigation or report, this report must be included in its entirety as an appendix or separate section to the main report.

# COPYRIGHT

Copyright on all documents, drawings and records, whether manually or electronically produced, which form part of the submission and any subsequent report or project document, shall vest in HCAC.

The client, on acceptance of any submission by HCAC and on condition that the client pays to HCAC the full price for the work as agreed, shall be entitled to use for its own benefit:

- The results of the project;
- The technology described in any report; and
- Recommendations delivered to the client.

Should the applicant wish to utilise any part of, or the entire report, for a project other than the subject project, permission must be obtained from HCAC to do so. This will ensure validation of the suitability and relevance of this report on an alternative project.

# **REPORT OUTLINE**

Appendix 6 of the GNR 326 EIA Regulations published on 7 April 2017 provides the requirements for specialist reports undertaken as part of the environmental authorisation process. In line with this, Table 1 provides an overview of Appendix 6 together with information on how these requirements have been met.

4

#### Table 1. Specialist Report Requirements.

| Requirement from Appendix 6 of GN 326 EIA Regulation 2017                                  | Chapter              |
|--|----------------------|
| (a) Details of -   | Section a            |
| (i) the specialist who prepared the report; and  | Section 12           |
| (ii) the expertise of that specialist to compile a specialist report including a           |                      |
| curriculum vitae   |                      |
| (b) Declaration that the specialist is independent in a form as may be specified by the    | Declaration of       |
| competent authority  | Independence         |
| (c) Indication of the scope of, and the purpose for which, the report was prepared         | Section 1            |
| (cA)an indication of the quality and age of base data used for the specialist report       | Section 3.4 and 7.1. |
| (cB) a description of existing impacts on the site, cumulative impacts of the proposed     | 9                    |
| development and levels of acceptable change;   |                      |
| (d) Duration, Date and season of the site investigation and the relevance of the           | Section 3.4          |
| season to the outcome of the assessment  |                      |

| specialised process inclusive of equipment and modelling used                              |                      |
| (f) details of an assessment of the specific identified sensitivity of the site related to | Section 8 and 9      |
| the proposed activity or activities and its associated structures and infrastructure,      |                      |
| inclusive of a site plan identifying site alternatives;                                    |                      |
| (g) Identification of any areas to be avoided, including buffers                           | Section 8 and 9      |
| (h) Map superimposing the activity including the associated structures and                 | Section 8            |
| infrastructure on the environmental sensitivities of the site including areas to be        |                      |
| avoided, including buffers   |                      |
| (I) Description of any assumptions made and any uncertainties or gaps in knowledge         | Section 3.7          |
| (j) a description of the findings and potential implications of such findings on the       | Section 9            |
| impact   |                      |
| of the proposed activity including identified alternatives on the environment or           |                      |
| activities;  |                      |
| (k) Mitigation measures for inclusion in the EMPr  | Section 9            |
| (I) Conditions for inclusion in the environmental authorisation                            | Section 9            |
| (m) Monitoring requirements for inclusion in the EMPr or environmental authorisation       | Section 9            |
| (n) Reasoned opinion -   | Section 9.2          |
| (i) as to whether the proposed activity, activities or portions thereof should             |                      |
| be authorised;   |                      |
| (iA) regarding the acceptability of the proposed activity or activities; and               |                      |
| (ii) if the opinion is that the proposed activity, activities or portions thereof          |                      |
| should be authorised, any avoidance, management and mitigation                             |                      |
| measures that should be included in the EMPr, and where applicable, the                    |                      |
| closure plan   |                      |
| (o) Description of any consultation process that was undertaken during the course of       | Section 6            |
| preparing the specialist report  |                      |
| (p) A summary and copies of any comments received during any consultation                  | Refer to BA report   |
| process and where applicable all responses thereto; and                                    |                      |
| (q) Any other information requested by the competent authority                             | Section 10           |

#### **Executive Summary**

Greenmined Environmental was appointed to conduct a Basic Assessment (BA) for a proposed mining right application for 25.4 ha for the extension of an existing quarry. The study area is located on the remaining extent of the farm Bloemhof 14, in the Ngwathe Local Municipality, Parys administrative district, Free State Province. HCAC was appointed to conduct a Heritage Impact Assessment to determine the presence of cultural heritage sites and the impact of the proposed development on non-renewable heritage resources. The study area was assessed both on desktop level and by a field survey. The field survey was conducted as a non-intrusive pedestrian survey to cover the extent of the mining right footprint.

The study area is characterised by an existing quarry and previously cultivated fields. These activities would have impacted on surface indicators of heritage sites and no archaeological sites or artefacts of significance were recorded during the survey. In terms of the palaeontological component of Section 35 the study area is indicated as of insignificant sensitivity on the SAHRIS paleontological map and no further studies are required in this regard. No further mitigation prior to construction is recommended in terms of Section 35 for the proposed development to proceed. In terms of the built environment of the area (Section 34), no structures older than 60 years occur in the study area. In terms of Section 36 of the Act no burial sites were recorded, however one stone cairn of unknown age and purpose was recorded. The cairn is possibly the result of clearing the fields for agricultural purposes but, although unlikely the cairn could indicate an informal grave. No public monuments are located within or close to the study area. The study area is characterised by an existing quarry and associated infrastructure and the proposed development will not impact negatively on significant cultural landscapes or viewscapes. During the public participation process conducted for the project no heritage concerns was raised.

The impact on heritage resources in the study area is low and it is recommended that the proposed project can commence on the condition that the following recommendations are implemented as part of the EMPr and based on approval from SAHRA:

- Although unlikely, the stone cairn could indicate a grave. It is therefore recommended that the cairn is preserved *in-situ* with a 20 meter buffer zone. If this is not possible, it must be proven that it is not a grave in which case no further actions are required.
- If any graves are located in future they should ideally be preserved *in-situ* or alternatively relocated according to existing legislation.
- Implementation of a chance find procedure.

#### **Declaration of Independence**

| Specialist Name             | Jaco van der Walt   |  |
|-----------------------------|---|--|
| Declaration of Independence | <ul> <li>I declare, as a specialist appointed in terms of the National Environmental Management Act (Act No 108 of 1998) and the associated 2014 Environmental Impact Assessment (EIA) Regulations, that I: <ul> <li>I act as the independent specialist in this application;</li> <li>I will perform the work relating to the application in an objective manner, even if this results in views and findings that are not favourable to the applicant;</li> <li>I declare that there are no circumstances that may compromise my objectivity in performing such work;</li> <li>I have expertise in conducting the specialist report relevant to this application, including knowledge of the Act, Regulations and any guidelines that have relevance to the proposed activity;</li> <li>I will comply with the Act, Regulations and all other applicable legislation;</li> <li>I have no, and will not engage in, conflicting interests in the undertaking of the activity;</li> <li>I undertake to disclose to the applicant and the competent authority all material information in my possession that reasonably has or may have the potential of influencing - any decision to be taken with respect to the application by the competent authority; and - the objectivity of any report, plan or document to be prepared by myself for submission to the competent authority;</li> <li>All the particulars furnished by me in this form are true and correct; and</li> <li>I realise that a false declaration is an offence in terms of regulation 48 and is punishable in terms of section 24F of the Act.</li> </ul> </li> </ul> |  |

#### a) Expertise of the specialist

Jaco van der Walt has been practising as a CRM archaeologist for 15 years. He obtained an MA degree in Archaeology from the University of the Witwatersrand focussing on the Iron Age in 2012 and is a PhD candidate at the University of Johannesburg focussing on Stone Age Archaeology with specific interest in the Middle Stone Age (MSA) and Later Stone Age (LSA). Jaco is an accredited member of ASAPA (#159) and have conducted more than 500 impact assessments in Limpopo, Mpumalanga, North West, Free State, Gauteng, KZN as well as he Northern and Eastern Cape Provinces in South Africa.

Jaco has worked on various international projects in Zimbabwe, Botswana, Mozambique, Lesotho, DRC Zambia and Tanzania. Through this he has a sound understanding of the IFC Performance Standard requirements, with specific reference to Performance Standard 8 – Cultural Heritage.

\*Although EIA refers to both Environmental Impact Assessment and the Early Iron Age both are internationally accepted abbreviations and must be read and interpreted in the context it is used.

# GLOSSARY

Archaeological site (remains of human activity over 100 years old) Early Stone Age (~ 2.6 million to 250 000 years ago) Middle Stone Age (~ 250 000 to 40-25 000 years ago) Later Stone Age (~ 40-25 000, to recently, 100 years ago) The Iron Age (~ AD 400 to 1840) Historic (~ AD 1840 to 1950) Historic building (over 60 years old)

# 1 Introduction and Terms of Reference:

Heritage Contracts and Archaeological Consulting CC (**HCAC**) has been contracted by Greenmined Environmental to conduct a heritage impact assessment of a mining right to mine 25.4 ha of the remaining extent of the farm Bloemhof 14, Parys, which falls in the Ngwathe Local Municipality in the Parys administrative district, Free State Province. The report forms part of the Environmental Impact Assessment Report (EIAR) and Environmental Management Programme Report (EMPR) for the development.

The aim of the study is to survey the proposed development footprint to identify cultural heritage sites, document, and assess their importance within local, provincial and national context. It serves to assess the impact of the proposed project on non-renewable heritage resources, and to submit appropriate recommendations with regard to the responsible cultural resources management measures that might be required to assist the developer in managing the discovered heritage resources in a responsible manner. It is also conducted to protect, preserve, and develop such resources within the framework provided by the National Heritage Resources Act of 1999 (Act No 25 of 1999). The report outlines the approach and methodology utilized before and during the survey, which includes: Phase 1, review of relevant literature; Phase 2, the physical surveying of the area on foot and by vehicle; Phase 3, reporting the outcome of the study.

During the survey one site (a stone cairn) of possible heritage significance was identified. General site conditions and features on sites were recorded by means of photographs, GPS locations, and site descriptions. Possible impacts were identified and mitigation measures are proposed in the following report. SAHRA as a commenting authority under section 38(8) of the National Heritage Resources Act, 1999 (Act No. 25 of 1999) require all environmental documents, complied in support of an Environmental Authorisation application as defined by NEMA EIA Regulations section 40 (1) and (2), to be submitted to SAHRA. As such the EIAR and its appendices must be submitted to the case as well as the EMPr, once it's completed by the Environmental Assessment Practitioner (EAP).

# 1.1 Terms of Reference

#### Field study

Conduct a field study to: (a) locate, identify, record, photograph and describe sites of archaeological, historical or cultural interest; b) record GPS points of sites/areas identified as significant areas; c) determine the levels of significance of the various types of heritage resources affected by the proposed development.

# Reporting

Report on the identification of anticipated and cumulative impacts the operational units of the proposed project activity may have on the identified heritage resources for all 3 phases of the project; i.e., construction, operation and decommissioning phases. Consider alternatives, should any significant sites be impacted adversely by the proposed project. Ensure that all studies and results comply with the relevant legislation, SAHRA minimum standards and the code of ethics and guidelines of ASAPA. To assist the developer in managing the discovered heritage resources in a responsible manner, and to protect, preserve, and develop them within the framework provided by the National Heritage Resources

Act of 1999 (Act No 25 of 1999).

# Table 2: Project Description

#### 2 Legislative Requirements

The HIA, as a specialist sub-section of the EIA, is required under the following legislation:

- National Heritage Resources Act (NHRA), Act No. 25 of 1999)
- National Environmental Management Act (NEMA), Act No. 107 of 1998 Section 23(2)(b)
- Mineral and Petroleum Resources Development Act (MPRDA), Act No. 28 of 2002 Section 39(3)(b)(iii)

A Phase 1 HIA is a pre-requisite for development in South Africa as prescribed by SAHRA and stipulated by legislation. The overall purpose of heritage specialist input is to:

12

- Identify any heritage resources, which may be affected;
- Assess the nature and degree of significance of such resources;
- Establish heritage informants/constraints to guide the development process through establishing thresholds of impact significance;
- Assess the negative and positive impact of the development on these resources; and
- Make recommendations for the appropriate heritage management of these impacts.

The HIA should be submitted, as part of the impact assessment report or EMPr, to the PHRA if established in the province or to SAHRA. SAHRA will ultimately be responsible for the professional evaluation of Phase 1 AIA reports upon which review comments will be issued. 'Best practice' requires Phase 1 AIA reports and additional development information, as per the impact assessment report and/or EMPr, to be submitted in duplicate to SAHRA after completion of the study. SAHRA accepts Phase 1 AIA reports authored by professional archaeologists, accredited with ASAPA or with a proven ability to do archaeological work.

Minimum accreditation requirements include an Honours degree in archaeology or related discipline and 3 years postuniversity CRM experience (field supervisor level). Minimum standards for reports, site documentation and descriptions are set by ASAPA in collaboration with SAHRA. ASAPA is based in South Africa, representing professional archaeology in the SADC region. ASAPA is primarily involved in the overseeing of ethical practice and standards regarding the archaeological profession. Membership is based on proposal and secondment by other professional members.

Phase 1 AIA's are primarily concerned with the location and identification of heritage sites situated within a proposed development area. Identified sites should be assessed according to their significance. Relevant conservation or Phase 2 mitigation recommendations should be made. Recommendations are subject to evaluation by SAHRA.

Conservation or Phase 2 mitigation recommendations, as approved by SAHRA, are to be used as guidelines in the developer's decision-making process.

Phase 2 archaeological projects are primarily based on salvage/mitigation excavations preceding development destruction or impact on a site. Phase 2 excavations can only be conducted with a permit, issued by SAHRA to the appointed archaeologist. Permit conditions are prescribed by SAHRA and includes (as minimum requirements) reporting back strategies to SAHRA and deposition of excavated material at an accredited repository.

In the event of a site conservation option being preferred by the developer, a site management plan, prepared by a professional archaeologist and approved by SAHRA, will suffice as minimum requirement.

After mitigation of a site, a destruction permit must be applied for with SAHRA by the applicant before development may proceed.

#### HIA - Bloemhof Mining Right

#### August 2018

Human remains older than 60 years are protected by the National Heritage Resources Act, with reference to Section 36. Graves older than 60 years, but younger than 100 years fall under Section 36 of Act 25 of 1999 (National Heritage Resources Act), as well as the Human Tissues Act (Act 65 of 1983), and are the jurisdiction of SAHRA. The procedure for Consultation Regarding Burial Grounds and Graves (Section 36[5]) of Act 25 of 1999) is applicable to graves older than 60 years that are situated outside a formal cemetery administrated by a local authority. Graves in this age category, located inside a formal cemetery administrated by a local authority. Graves in this age category, located to one, permission from the local authority is required and all regulations, laws and by-laws, set by the cemetery authority, must be adhered to.

13

Human remains that are less than 60 years old are protected under Section 2(1) of the Removal of Graves and Dead Bodies Ordinance (Ordinance No. 7 of 1925), as well as the Human Tissues Act (Act 65 of 1983), and are the jurisdiction of the National Department of Health and the relevant Provincial Department of Health and must be submitted for final approval to the office of the relevant Provincial Premier. This function is usually delegated to the Provincial MEC for Local Government and Planning; or in some cases, the MEC for Housing and Welfare. Authorisation for exhumation and reinternment must also be obtained from the relevant local or regional council where the grave is situated, as well as the relevant local or regional council to where the grave is being relocated. All local and regional provisions, laws and by-laws must also be adhered to. To handle and transport human remains, the institution conducting the relocation should be authorised under Section 24 of Act 65 of 1983 (Human Tissues Act).

#### 3 METHODOLOGY

#### 3.1 Literature Review

A brief survey of available literature was conducted to extract data and information on the area in question to provide general heritage context into which the development would be set. This literature search included published material, unpublished commercial reports and online material, including reports sourced from the South African Heritage Resources Information System (SAHRIS).

#### 3.2 Genealogical Society and Google Earth Monuments

Google Earth and 1:50 000 maps of the area were utilised to identify possible places where sites of heritage significance might be located; these locations were marked and visited during the field work phase. The database of the Genealogical Society was consulted to collect data on any known graves in the area.

#### 3.3 Public Consultation and Stakeholder Engagement:

Stakeholder engagement is a key component of any BAR process, it involves stakeholders interested in, or affected by the proposed development. Stakeholders are provided with an opportunity to raise issues of concern (for the purposes of this report only heritage related issues will be included). The aim of the public consultation process was to capture and address any issues raised by community members and other stakeholders during key stakeholder and public meetings. The process involved:

- Placement of advertisements and site notices
- Stakeholder notification (through the dissemination of information and meeting invitations);
- Stakeholder meetings undertaken with I&APs;
- Authority Consultation
- The compilation of a BAR.

Please refer to Section 6 for more detail.

#### 3.4 Site Investigation

Conduct a field study to: a) systematically survey the proposed project area to locate, identify, record, photograph and describe sites of archaeological, historical or cultural interest; b) record GPS points of sites/areas identified as significant areas; c) determine the levels of significance of the various types of heritage resources recorded in the project area.

#### **Table 4: Site Investigation Details**

|        | Site Investigation   |
|--------|--|
| Date   | 2 August 2018  |
| Season | Winter – vegetation in the study area is knee high with good archaeological visibility. The impact area was sufficiently covered (Figure 4) to adequately record the presence of heritage resources. |

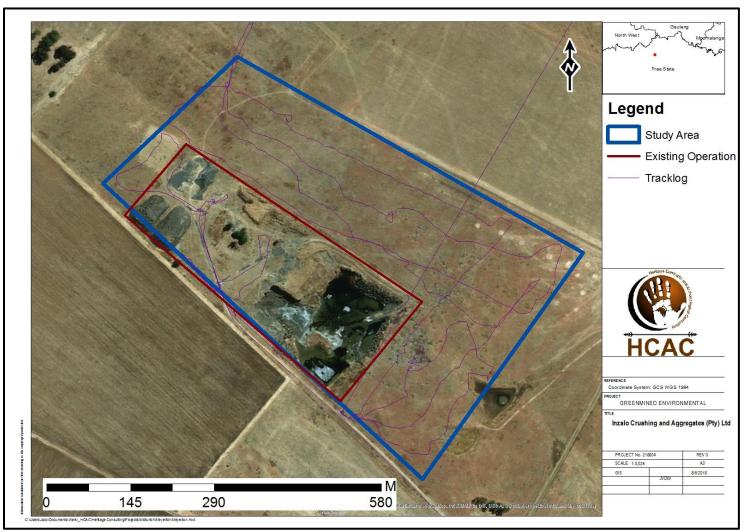

Figure 4: Track logs of the survey in purple.

#### 3.5 Site Significance and Field Rating

Section 3 of the NHRA distinguishes nine criteria for places and objects to qualify as 'part of the national estate' if they have cultural significance or other special value. These criteria are:

- Its importance in/to the community, or pattern of South Africa's history;
- Its possession of uncommon, rare or endangered aspects of South Africa's natural or cultural heritage;
- Its potential to yield information that will contribute to an understanding of South Africa's natural or cultural heritage;
- Its importance in demonstrating the principal characteristics of a particular class of South Africa's natural or cultural places or objects;
- Its importance in exhibiting particular aesthetic characteristics valued by a community or cultural group;
- Its importance in demonstrating a high degree of creative or technical achievement at a particular period;
- Its strong or special association with a particular community or cultural group for social, cultural or spiritual reasons;
- Its strong or special association with the life or work of a person, group or organisation of importance in the history of South Africa;
- Sites of significance relating to the history of slavery in South Africa.

The presence and distribution of heritage resources define a 'heritage landscape'. In this landscape, every site is relevant. In addition, because heritage resources are non-renewable, heritage surveys need to investigate an entire project area, or a representative sample, depending on the nature of the project. In the case of the proposed project the local extent of its impact necessitates a representative sample and only the footprint of the areas demarcated for development were surveyed. In all initial investigations, however, the specialists are responsible only for the identification of resources visible on the surface. This section describes the evaluation criteria used for determining the significance of archaeological and heritage sites. The following criteria were used to establish site significance with cognisance of Section 3 of the NHRA:

- The unique nature of a site;
- The integrity of the archaeological/cultural heritage deposits;
- The wider historic, archaeological and geographic context of the site;
- The location of the site in relation to other similar sites or features;
- The depth of the archaeological deposit (when it can be determined/is known);
- The preservation condition of the sites; and
- Potential to answer present research questions.

In addition to this criteria field ratings prescribed by SAHRA (2006), and acknowledged by ASAPA for the SADC region, were used for the purpose of this report. The recommendations for each site should be read in conjunction with section 10 of this report.

| FIELD RATING                 | GRADE    | SIGNIFICANCE             | RECOMMENDED MITIGATION               |
|------------------------------|----------|--------------------------|--------------------------------------|
| National Significance (NS)   | Grade 1  | -                        | Conservation; national site          |
|                              |          |                          | nomination                           |
| Provincial Significance (PS) | Grade 2  | -                        | Conservation; provincial site        |
|                              |          |                          | nomination                           |
| Local Significance (LS)      | Grade 3A | High significance        | Conservation; mitigation not advised |
| Local Significance (LS)      | Grade 3B | High significance        | Mitigation (part of site should be   |
|                              |          |                          | retained)                            |
| Generally Protected A (GP.A) | -        | High/medium significance | Mitigation before destruction        |
| Generally Protected B (GP.B) | -        | Medium significance      | Recording before destruction         |
| Generally Protected C (GP.C) | -        | Low significance         | Destruction                          |

#### 3.6 Impact Assessment Methodology

The criteria below are used to establish the impact rating on sites:

- The **nature**, which shall include a description of what causes the effect, what will be affected and how it will be affected.
- The **extent**, wherein it will be indicated whether the impact will be local (limited to the immediate area or site of development) or regional, and a value between 1 and 5 will be assigned as appropriate (with 1 being low and 5 being high):
- The duration, wherein it will be indicated whether:
  - \* the lifetime of the impact will be of a very short duration (0-1 years), assigned a score of 1;
  - \* the lifetime of the impact will be of a short duration (2-5 years), assigned a score of 2;
  - \* medium-term (5-15 years), assigned a score of 3;
  - \* long term (> 15 years), assigned a score of 4; or
  - \* permanent, assigned a score of 5;
  - The **magnitude**, quantified on a scale from 0-10 where; 0 is small and will have no effect on the environment, 2 is minor and will not result in an impact on processes, 4 is low and will cause a slight impact on processes, 6 is moderate and will result in processes continuing but in a modified way, 8 is high (processes are altered to the extent that they temporarily cease), and 10 is very high and results in complete destruction of patterns and permanent cessation of processes.
  - The **probability of occurrence**, which shall describe the likelihood of the impact actually occurring. Probability will be estimated on a scale of 1-5 where; 1 is very improbable (probably will not happen), 2 is improbable (some possibility, but low likelihood), 3 is probable (distinct possibility), 4 is highly probable (most likely) and 5 is definite (impact will occur regardless of any prevention measures).
  - The **significance**, which shall be determined through a synthesis of the characteristics described above and can be assessed as low, medium or high; and
  - the status, which will be described as either positive, negative or neutral.
  - the degree to which the impact can be reversed.
  - the degree to which the impact may cause irreplaceable loss of resources.
  - the *degree* to which the impact can be mitigated.

The **significance** is calculated by combining the criteria in the following formula:

S=(E+D+M) P

- S = Significance weighting
- E = Extent
- D = Duration
- M = Magnitude
- P = Probability

The **significance weightings** for each potential impact are as follows:

• < 30 points: Low (i.e., where this impact would not have a direct influence on the decision to develop in the area),

18

- 30-60 points: Medium (i.e., where the impact could influence the decision to develop in the area unless it is effectively mitigated),
- 60 points: High (i.e., where the impact must have an influence on the decision process to develop in the area).

# 3.7 Limitations and Constraints of the study

The authors acknowledge that the brief literature review is not exhaustive on the literature of the area. Due to the subsurface nature of archaeological artefacts, the possibility exists that some features or artefacts may not have been discovered/recorded during the survey and the possible occurrence of unmarked graves and other cultural material cannot be excluded. Similarly, the depth of the deposit of heritage sites cannot be accurately determined due its subsurface nature. This report only deals with the footprint area of the proposed development and consisted of non-intrusive surface surveys. This study did not assess the impact on medicinal plants and intangible heritage as it is assumed that these components would have been highlighted through the public consultation process if relevant. It is possible that new information could come to light in future, which might change the results of this Impact Assessment.

# 4 Description of Socio Economic Environmental

4.1.1.1.1 StatsSA provide the following information: "According to Census 2011,Ngwathe Local Municipality has a total population of 120520 people, of which 86,5% are black African, 10,3% are white people and with the other population groups making up the remaining 3,2%. Of those aged 20 years and older, 5,4% have completed primary school, 34,7% have some secondary education, 25,9% have completed matric and 6,4% have some form of higher education. There are 39 555 economically active (employed or unemployed but looking for work) people, and of these 35,2% are unemployed. Of the 20 204economically active youth (15–35 years) in the area, 45,1% are unemployed ".

# 5 Description of the Physical Environment:

The proposed mining site will be an extension of the existing quarry pit. The surrounding area is disturbed by the previous stone aggregate mining activities as well as cultivated fields. The study area measures approximately 25.4 ha and is located on the remaining extent of the farm Bloemhof 14 approximately 75 km North of Kroonstad, Free State Province.

The prevailing vegetation type and landscape features of the area form part of the Undulating plains supporting short grassland, in natural condition dominated by *Themeda triandra* while *Eragrostis curvula* and *E. chloromelas* become dominant in degraded habitats. Dwarf karoo bushes establish in severely degraded clayey bottomlands. Overgrazed and trampled low-lying areas with heavy clayey soils are prone to *Acacia karroo* encroachment (Mucina & Rutherford, 2006).

The proposed site shows features of the described vegetation types and is characterised by an existing quarry and associated infrastructure (Figure 5 - 8).

#### HIA – Bloemhof Mining Right

# 6 Results of Public Consultation and Stakeholder Engagement:

#### 6.1.1 Stakeholder Identification

Adjacent landowners and the public at large were informed of the proposed activity as part of the EIA process. Site notices and advertisements notifying interested and affected parties were placed at strategic points and in local newspapers as part of the process.

# 7 Literature / Background Study:

#### 7.1 Literature Review

The following reports were conducted in the immediate vicinity of the study area and were consulted for this report:

|                       | Year | Project   | Findings                        |

# 7.1.1 Genealogical Society and Google Earth Monuments

No known grave sites are indicated in the study area.

HCAC

#### 7.2 General History of the area

#### 7.2.1 Archaeology of the area

The archaeological record for the greater study area consists of the Stone Age and Iron Age.

#### 7.2.1.1 Stone Age

South Africa has a long and complex Stone Age sequence of more than 2 million years. The broad sequence includes the Later Stone Age, the Middle Stone Age and the Earlier Stone Age. Each of these phases contains sub-phases or industrial complexes, and within these we can expect regional variation regarding characteristics and time ranges. For Cultural Resources Management (CRM) purposes it is often only expected/ possible to identify the presence of the three main phases.

Yet sometimes the recognition of cultural groups, affinities or trends in technology and/or subsistence practices, as represented by the sub-phases or industrial complexes, is achievable (Lombard 2011). The three main phases can be divided as follows;

- » Later Stone Age; associated with Khoi and San societies and their immediate predecessors. Recently to ~30 thousand years ago. This period is associated with Homo sapiens sapiens. Material culture from this period includes: microlithic stone tools; ostrich eggshell beads and rock art. Sites in the open are usually poorly preserved and therefore have less value than sites in caves or rock shelters. Since there are no caves in the study area no LSA sites of significance is expected.
- Middle Stone Age; associated with Homo sapiens and archaic modern human . 30-300 thousand years ago. This period is first associated with archaic Homo sapiens and later Homo sapiens sapiens. Material culture includes stone tools with prepared platforms and stone tools attached to handles. Isolated MSA artefacts can be expected but it is not anticipated that these finds will have conservation value.
- Earlier Stone Age; associated with early Homo groups such as Homo habilis and Homo erectus. 400 000-> 2 million years ago. Acheulean stone tools are dominant. No Acheulian sites are on record near the project area, but isolated finds may be possible. However, isolated finds have little value. Therefore, the project is unlikely to disturb a significant site.

The Vaal Gravels are known to contain Early and Middle Stone Age Artefacts and some Rock Engraving sites are on record around the greater study area. Hollmann (1999) described the rock engraving site of Leeuwkuil as being located on a small island in the Vaal River. Engravings are concentrated on the south-eastern part of the peninsula.

The images are dominated by Eland and other antelope, which appeared to be in the San hunter-gatherer engraving tradition (Hollmann, 1999). Pistorius (2007) discusses the Redan rock engraving site which contains up to 244 rock engravings. These engravings depict animals, geometric designs as well as San weapons (Du Piesanie 2014).

#### HIA – Bloemhof Mining Right

#### 7.2.1.2 Iron Age (general)

The Iron Age as a whole represents the spread of Bantu speaking people and includes both the pre-Historic and Historic periods. It can be divided into three distinct periods:

The Early Iron Age: Most of the first millennium AD.

The Middle Iron Age: 10th to 13th centuries AD

The Late Iron Age: 14th century to colonial period.

The Iron Age is characterised by the ability of these early people to manipulate and work Iron ore into implements that assisted them in creating a favourable environment to make a better living.

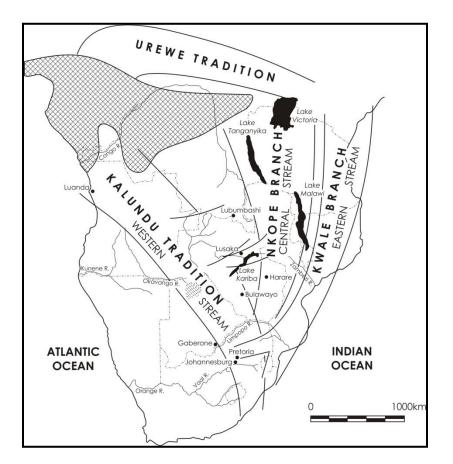

Figure 9: Movement of Bantu speaking farmers (Huffman 2007)

No Sites dating to the Early or Middle Iron Age have been recorded or is expected for the study area. The same goes for the Later Iron Age period where the study area is situated outside the eastern and southern periphery of known distribution of Late Iron Age settlements in the Free State.

# 7.2.1.3 Historical Background

The first Europeans arrived in the Cape in 1652, and expansion to the north only started in the late 1820s. In 1836 on 16 October the Battle of Vechtkop (Vegkop), near present day Heilbron, FS, between the Voortrekkers and the Ndebele took place.

23

The Great Trek of 1837 resulted in a mass migration of white people into the northern areas of South Africa (Ross 2002:39). The discovery of diamonds and gold in the northern provinces between 1867 and 1886 had very important consequences for South Africa. After the discovery of these resources, the British, who at the time had colonized the Cape and Natal, had intensions of expanding their territory into the northern Boer republics. This eventually led to the Anglo-Boer War, which took place between 1899 and 1902, and which was one of the most turbulent times in South Africa's history. Even before the outbreak of war in October 1899 British politicians, including Sir Alfred Milner and Mr. Chamberlain, had declared that should Britain's differences with the Z.A.R. result in violence, it would mean the end of republican independence. This decision was not immediately publicized, and subsequently republican leaders based their assessment of British intentions on the more moderate public utterances of British leaders. In March 1900, they asked Lord Salisbury to agree to peace on the basis of the status guo ante bellum. Salisbury's reply was, however, a clear statement of British war aims. (Du Preez 1977). The northern Free State is located within the area where some of the main operations of the Boer General, Christiaan De Wet, took place between 1899 and May 1900 when the war ended. De Wet, among the other Boer generals, realized that they could not win the war by conventional means, and spread out into small hit-and-run groups that inflicted serious casualties on the British armies. This is known as Guerrilla warfare. The British Commander-In-Chief, Lord Kitchener, consequently turned to the destruction of Boer crops and built concentration camps where the wives and children of the Boer soldiers were interned. This "scorched earth" policy of the British finally resulted in the demoralisation of the Boers. (Readers Digest 1984: 33)

Some skirmishes took place on towns in the vicinity of the study area. On 12 March 1900, on the eve of the occupation of Bloemfontein by Lord Roberts, President M. T. Steyn declared Kroonstad the new capital of the Free State government. It simultaneously became the organizing centre for retreating Boer commandos and a depot for stores of all kinds. It was also at Kroonstad that it was decided in March 1900 to abolish wagon laagers and to employ mounted commandos instead. This heralded a new method of warfare with increased mobility, which later became known as guerrilla warfare. Kroonstad remained the Free State capital until 11 May 1900, when the British were victorious at Zand River. Kroonstad remained in British hands for the rest of the war, and housed concentration camps for both Boer civilians and black people. (Pretorius 2010: 225-226)

Lindley is another town located close to where some of the very few successful Boer sieges during the war took place here. Spagge's Battalion of 500 men reached Lindley from Kroonstad on 27 May 1900. The battalion had covered 90 miles in three days and only had rations for two days. As they approached Lindley, the battalion came under heavy rifle fire from a group of Boers. During five days of fighting the British casualties came to 468. The British finally gave in when they realized they were completely surrounded, and became the prisoners of war of General Piet de Wet. (Pretorius 2010: 244-245).

A central figure in the establishment of the town Koppies (located 19 km from the study area) was Emily Hobhouse. Concerned about the economic and personal losses of the Boer people, throughout the Anglo Boer war, she promoted the idea of home-industry among the inhabitants of the town. Her vision and courage were manifested in the Lace school at Phillipolis.

Peace talks between the Boers and the British had started around April 1902, and culminated in the Peace of Vereeniging treaty on 31 May 1902. This event signalled the end of the Anglo-Boer War, as well as the temporary end of the Boer Republics' independence. (Geskiedenisatlas van Suid-Afrika 1999: 251)

In 1904, General C.R. de Wet established a settlement on the banks of the Renoster River for underprivileged whites. He donated his Farm "Rooipoort" in order to relieve the poverty caused by the war in the form of a few morgen irrigation land, and then a few morgen "dry" land for cultivating maize. Inhabitants were supplied with a few eggs and a paraffin lamp/hatcher for the eggs. In 1926 this settlement achieved municipal rights and became the town of Koppies. By demand/pressure of General De Wet, the "Koppies Dam" was constructed to supply water for irrigation, and work to the local people who needed it badly.

# 7.2.2 Cultural Landscape

This site is situated just to the east of the N1, about 19 kilometres to the east of Vredefort and about 20 kilometres to the south east of Parys in Free State Province.

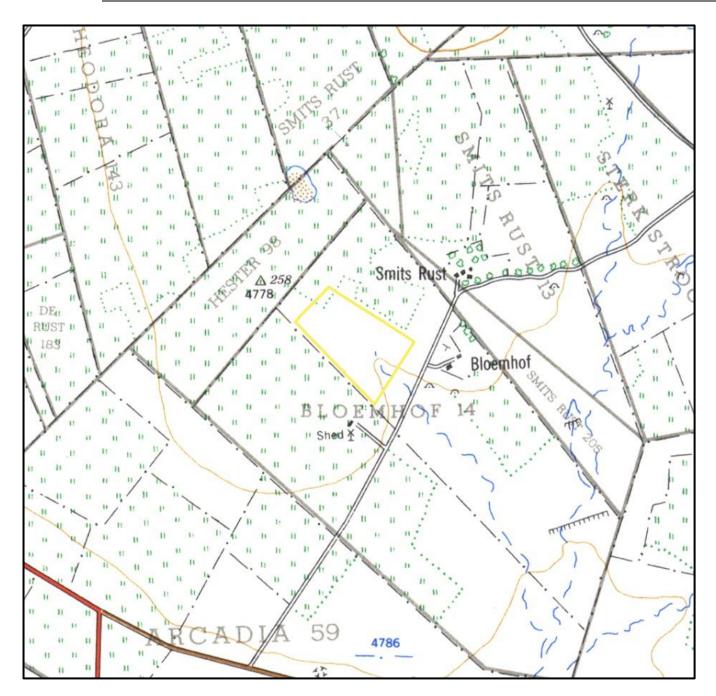

Figure 10. 1964 Topographical map of the site under investigation. The approximate study area is indicated with a yellow border. A small north western section of the study area was under cultivation, and a stream ended in the south eastern part of the property. No buildings or other developments can be seen. (Topographical Map 1964)

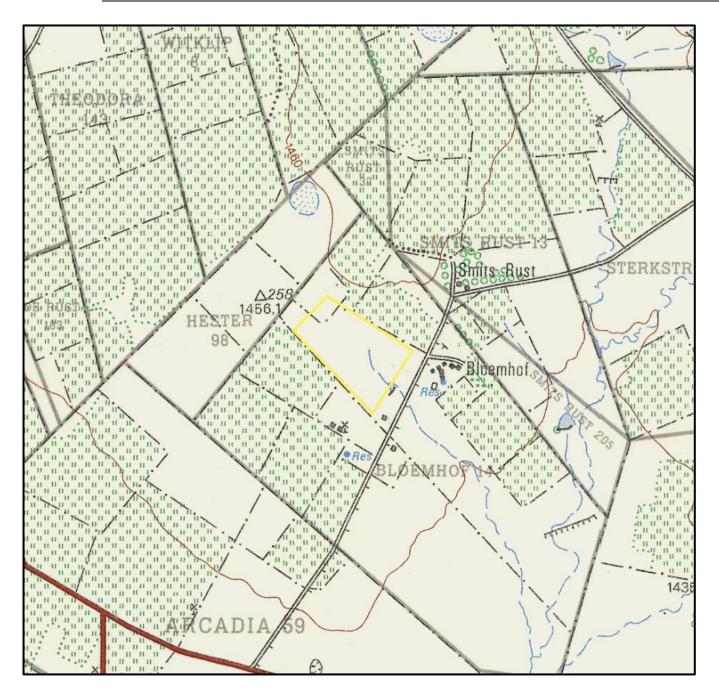

Figure 11. 1976 Topographical map of the site under investigation. The approximate study area is indicated with a yellow border. A stream ended in the south eastern part of the property, and a small dam is visible. No buildings or other developments can be seen. (Topographical Map 1976)

HIA – Bloemhof Mining Right

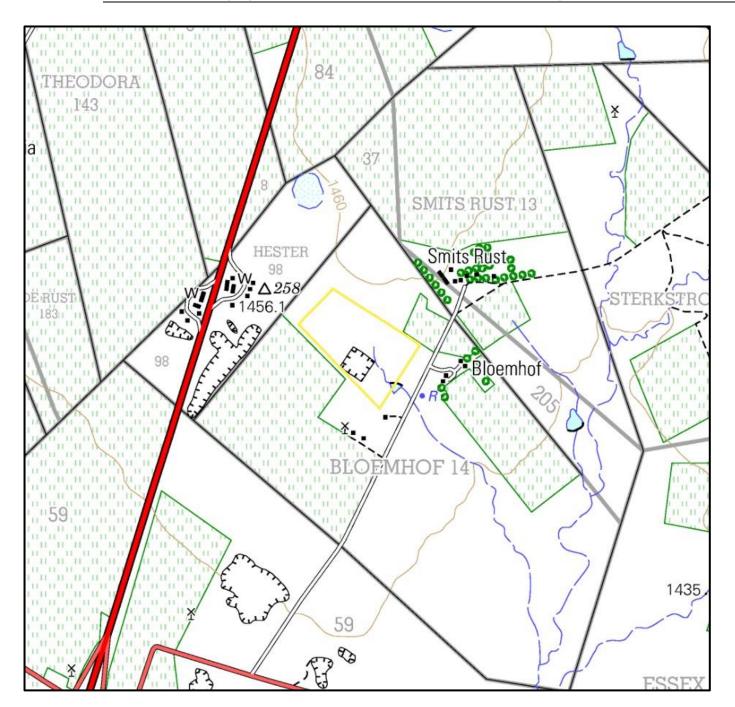

Figure 12. 1997 Topographical map of the site under investigation. The approximate study area is indicated with a yellow border. One can see a square excavation site in the south western part of the study area. A stream and a small dam are visible to the east thereof. No buildings were present. (Topographical Map 1997)

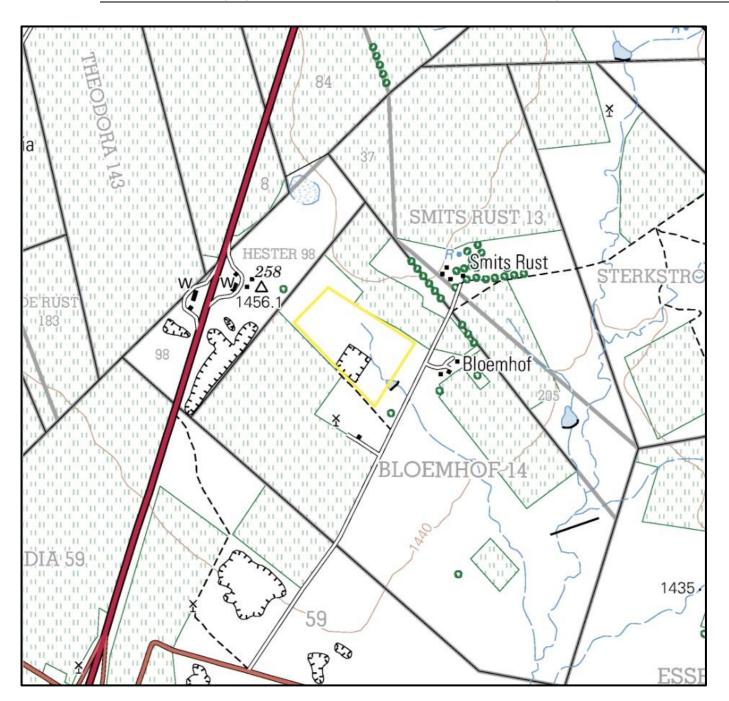

Figure 13. 2007 Topographical map of the site under investigation. The approximate study area is indicated with a yellow border. This map is almost identical to the 1997 map. (Topographical 2007)

August 2018

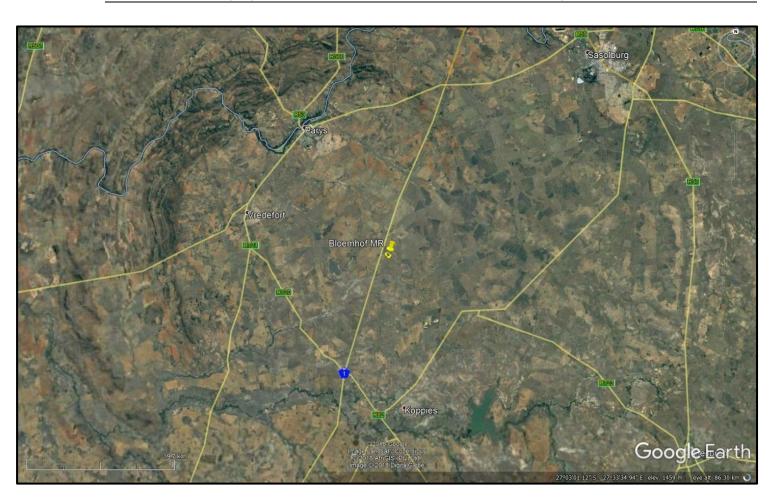

Figure 14. 2018 Google Earth image showing the study area in relation to the N1, Vredefort, Parys, Sasolburg, Koppies and other sites. (Google Earth 2018)

#### 7. Findings of the Survey

It is important to note that only the proposed mining right area was surveyed. The study area was surveyed over a period of 1 day. The study area is characterised by a existing quarry located within the south western portion of the study area. The rest of the property is open and flat currently being fallow, and was most probably used for grazing. In the eastern portion of the study area there is a small stream that drains into a small dam located to the east and outside of the study area. A gravel road forms the southern boundary of the study area. The site is located just to the east of the N1 and the Kroonvaal toll Plaza. Land use is predominantly agricultural (grazing for cattle). There is no major land marks within the study area although the stone aggregate that will be mined is protruding through the quaternary sand cover in the south eastern portion.

In terms of the national estate as defined by the NHRA one site of possible significance (stone cairn) was found during the survey (Figure 12) as described below.

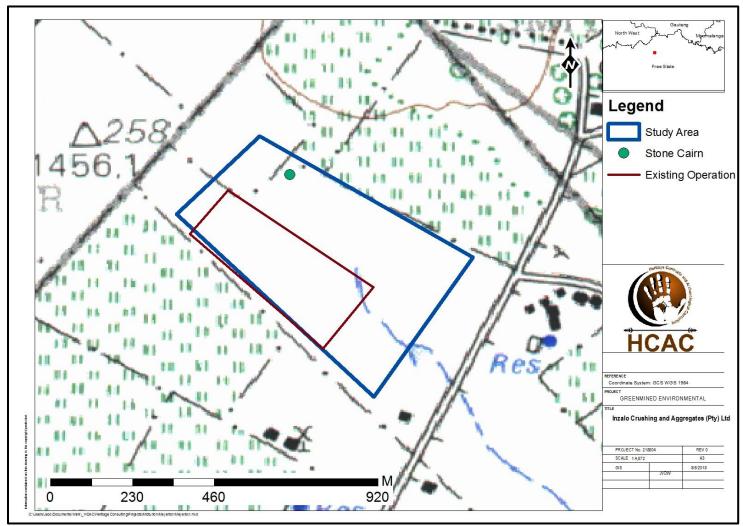

Figure 15. Identified features in the study area

# 7.3. Built Environment (Section 34 of the NHRA)

No standing structures older than 60 years occur in the study area and no further mitigation is required in this regard.

# 7.4. Archaeological and palaeontological resources (Section 35 of the NHRA)

No archaeological sites or material was recorded during the survey. No further mitigation prior to construction is recommended in terms of Section 35 of the NHRA for the proposed development to proceed. In terms of the palaeontology the area is indicated as of insignificant sensitivity on the SAHRIS paleontological map and no further studies are required in this regard.

Figure 16. Study area indicated on the paleontological sensitivity map as of no sensitivity.

# 7.5. Burial Grounds and Graves (Section 36 of the NHRA)

In terms of Section 36 of the Act no graves were identified, however a stone cairn of unknown purpose was identified at 27.5604530051 -27.0492369588. The stone cairn measures approximately 1.2 meter in diameter and is not easily recognisable as it is overgrown with knee-high grass. It's unlikely that the cairn represents a grave and it is most likely a result of clearing fields for agricultural purposes. The area must be avoided until it can be proven that the cairn does not represent a grave.

Figure 18. Stone cairn

32 32

Figure 17. General site conditions (Cairns)

# 7.6. Cultural Landscapes, Intangible and Living Heritage.

Long term impact on the cultural landscape is considered to be negligible as the immediate surrounding area consists of an area that has been subjected to previous mining from the 1990's onwards (Figure 12). Visual impacts to scenic routes and sense of place are also considered to be low due to the other developments in the area.

# 7.7. Battlefields and Concentration Camps

There are no battlefields or concentration camp sites in the study area.

# 7.8. Potential Impact

If the correct mitigation measures are followed the impact on the identified cairns can be mitigated to an acceptable level. The chances of impacting unknown archaeological sites in the study area is considered to be negligible. Any direct impacts that did occur would be during the construction phase only and would be of very low significance. Cumulative impacts occur from the combination of effects of various impacts on heritage resources. The importance of identifying and assessing cumulative impacts is that the whole is greater than the sum of its parts. In the case of the development, it will, with the recommended mitigation measures and management actions, not impact any heritage resources directly. However, this and other projects in the area could have an indirect impact on the larger heritage landscape. The lack of any heritage resources in the immediate area and the extensive existing development surrounding the study area minimises additional impact on the landscape.

# 7.8.1. Pre-Construction phase:

It is assumed that the pre-construction phase involves the removal of topsoil and vegetation as well as the establishment of infrastructure needed for the construction phase. These activities can have a negative and irreversible impact on heritage sites. Impacts include destruction or partial destruction of non-renewable heritage resources.

# 7.8.2. Construction Phase

During this phase, the impacts and effects are similar in nature but more extensive than the preconstruction phase. These activities can have a negative and irreversible impact on heritage sites. Impacts include destruction or partial destruction of non-renewable heritage resources.

# 7.8.3. Operation Phase:

No impact is envisaged for the recorded heritage resources during this phase.

#### Table 5. Impact Assessment table of the project on heritage resources.

*Nature:* During the construction phase activities resulting in disturbance of surfaces and/or sub-surfaces may destroy, damage, alter, or remove from its original position archaeological material or objects.

|                                  | Without mitigation         | With mitigation                    |  |
|----------------------------------|----------------------------|------------------------------------|--|
|                                  |                            | (Preservation/ excavation of site) |  |
| Extent                           | Local (1)                  | Local (1)                          |  |
| Duration                         | Permanent (5)              | Permanent (5)                      |  |
| Magnitude                        | Moderate (6)               | Moderate (6)                       |  |
| Probability                      | Probable (4)               | Not probable (2)                   |  |
| Significance                     | 48 (Medium)                | 24 (Low)                           |  |
| Status (positive or<br>negative) | Negative                   | Negative                           |  |
| Reversibility                    | Not reversible             | Not reversible                     |  |
| Irreplaceable loss of resources? | No resources were recorded | No resources were recorded.        |  |
| Can impacts be mitigated?        | Yes.                       | Yes                                |  |
| Mitigation:                      |                            |                                    |  |

If the cairn represents a grave it should be avoided with a 20 m buffer zone. If the cairn is the result of the clearance of agricultural fields no further actions are required. A chance find procedure should be implemented for the project.

Cumulative impacts:

Cumulative impacts are considered to be low if the recommendations are implemented. *Residual Impacts:* 

If sites are destroyed this results in the depletion of archaeological record of the area. However, if sites are recorded and preserved or mitigated this adds to the record of the area.

# 8. Conclusion and recommendations

HCAC was appointed to conduct a Heritage Impact Assessment for a proposed mining right application for the expansion of an existing quarry. The study area measures 25.4 ha located on the remaining extent of the farm Bloemhof 14, Parys, which falls in the Ngwathe Local Municipality in the Parys administrative district, Free State Province. The study area was assessed both on desktop level and by a field survey. The field survey was conducted as a non-intrusive pedestrian survey to cover the extent of the mining right footprint.

Impacts from mining activities relating to the existing quarry occurred from the 1990's (Figure 12) onwards, in addition the surrounding area was cultivated.. These activities would have impacted on surface indicators of heritage sites and no archaeological sites or artefacts of significance were recorded during the survey. In terms of the palaeontological component the area is indicated as of insignificant sensitivity on the SAHRIS paleontological map and no further studies are required in this regard. No further mitigation prior to construction is recommended in terms of Section 35 for the proposed development to proceed. In terms of the built environment of the area (Section 34), no structures older than 60 years occur in the study area. In terms of Section 36 of the Act no burial sites were recorded, however one stone cairn of unknown age and purpose was recorded. The cairn is possibly the result of clearing the fields for agricultural purposes but, although unlikely, the cairn could indicate an informal grave. No public monuments are located within or close to the study area. The study area is characterised by an existing quarry and associated infrastructure and the proposed development will not impact negatively on significant cultural landscapes or viewscapes. During the public participation process conducted for the project no heritage concerns was raised.

The impact on heritage resources in the study area is considered low and it is recommended that the proposed project can commence on the condition that the following recommendations are implemented as part of the EMPr and based on approval from SAHRA:

- Although unlikely, the stone cairn could indicate a grave. It is therefore recommended that the cairn is preserved *in-situ* with a 20 meter buffer zone. If this is not possible, it must be proven that it is not a grave in which case no further actions are required.
- If any graves are located in future they should ideally be preserved *in-situ* or alternatively relocated according to existing legislation.
- Implementation of a chance find procedure as detailed below.

# 9.1. Chance Find Procedures

The possibility of the occurrence of subsurface finds cannot be excluded. Therefore, if during construction any possible finds such as stone tool scatters, artefacts or bone and fossil remains are made, the operations must be stopped and a qualified archaeologist must be contacted for an assessment of the find and therefor chance find procedures should be put in place as part of the EMP. A short summary of chance find procedures is discussed below.

This procedure applies to the developer's permanent employees, its subsidiaries, contractors and subcontractors, and service providers. The aim of this procedure is to establish monitoring and reporting procedures to ensure compliance with this policy and its associated procedures. Construction crews must

be properly inducted to ensure they are fully aware of the procedures regarding chance finds as discussed below.

 If during the pre-construction phase, construction, operations or closure phases of this project, any person employed by the developer, one of its subsidiaries, contractors and subcontractors, or service provider, finds any artefact of cultural significance or heritage site, this person must cease work at the site of the find and report this find to their immediate supervisor, and through their supervisor to the senior on-site manager.

35 35

- It is the responsibility of the senior on-site Manager to make an initial assessment of the extent of the find, and confirm the extent of the work stoppage in that area.
- The senior on-site Manager will inform the ECO of the chance find and its immediate impact on operations. The ECO will then contact a professional archaeologist for an assessment of the finds who will notify the SAHRA.

# 9.2 Reasoned Opinion

The impact on heritage resources in the study area can be mitigated to an acceptable level and it is recommended that the proposed project can commence on the condition that the recommendations in this report are implemented as part of the EMPr and based on approval from SAHRA. Furthermore, the socio-economic benefits also outweigh the possible impacts of the development if the correct mitigation measures are implemented for the project.
