18/06/2025

ADDENDUM: VISUAL IMPACT ASSESSMENT FOR THE PROPOSED MAKGANYANE MINING RIGHT

This addendum confirms that the revised layout of the Stockpile Area (SA) and Waste Rock Dump (WRD), received after submission of the original VIA report, has been reviewed for its potential visual implications.

Confirmation of Findings:

- The changes to the SA and WRD layout are limited to refinements within the previously assessed visual envelope.
- These modifications do not extend the visual footprint beyond the zone of potential visual influence (ZPVI) already modelled and assessed.
- There is no anticipated change in the viewshed, visual exposure, or magnitude of visual intrusion for any receptors.
- The original mitigation measures remain relevant and adequate.

The updated layout does not materially alter the visual impact findings presented in the final VIA report (dated 2 May 2025). The conclusions, significance ratings, and recommendations remain valid. This addendum is submitted for completeness and forms part of the final submission.
